

Sharma M

Java Backend Engineer | Spring Boot | Microservices

+91 97913 10502 | sharmamurugaiyan@gmail.com | LinkedIn | GitHub | Notice Period: Immediate

Professional Summary

- **Java Backend Engineer with 6+ years of Experience** (including 1.5+ years freelance) designing scalable microservices and high-throughput distributed systems using Spring Boot and Java.
- Specialized in Kafka-based event-driven architecture, REST API development, Redis caching, and performance optimization — achieving 30% API latency reduction in production.
- Experienced in secure backend development (OAuth2, JWT, Spring Security), cloud platforms (AWS, Azure), fault-tolerant systems (Resilience4j), and Agile delivery.

Technical Skills

- **Languages:** Java, SQL
- **Frameworks:** Spring Boot, Spring Cloud, Spring MVC, Spring Data JPA, Hibernate
- **Backend & Architecture:** Microservices, REST APIs, Event-driven Architecture, Distributed Systems, Fault Tolerance (Resilience4j)
- **Messaging & Caching:** Apache Kafka, Redis
- **Security:** Spring Security, OAuth2, JWT
- **Databases:** MySQL, SQL Server
- **DevOps & Tools:** Docker, Jenkins, Git, Maven, Swagger/OpenAPI
- **Cloud:** AWS, Azure
- **Testing:** JUnit, Mockito
- **Methodologies:** Agile, Scrum

Experience

Software Engineer

Sep 2021 – Present

Intulogic Private Limited, Chennai, India

- Architected and delivered scalable **Spring Boot microservices** on **AWS/Azure** handling high-throughput enterprise workloads, reducing deployment cycle time and improving system uptime.
- Designed, versioned, and maintained **20+ REST APIs** with **OpenAPI/Swagger** documentation, enabling seamless integration across internal services and frontend teams with zero breaking changes.
- Built **Kafka-based event-driven pipelines** for asynchronous inter-service communication, decoupling 5+ microservices and improving fault isolation and throughput across the platform.
- Reduced API latency by **30%** by implementing **Redis caching**, query optimization, and **HikariCP** connection pool tuning — directly improving SLA compliance under peak load.
- Implemented end-to-end authentication and authorization using **OAuth2, JWT, and Spring Security**, enforcing **RBAC** across multi-tenant SaaS modules serving enterprise clients.
- Enforced fault tolerance using **Resilience4j** (circuit breaker, retry, rate limiter), reducing cascading failure incidents and improving distributed system resilience.
- Containerized services using **Docker** and managed CI/CD pipelines via **Jenkins**, streamlining build-deploy workflows within Agile/Scrum delivery cycles.

Backend Developer

Jan 2019 – Aug 2021

Self-Employed (Freelance), Remote

- Designed and delivered **Java/Spring Boot** backend applications for clients across healthcare, e-commerce, and logistics domains, handling full SDLC from requirements to deployment.

- Built and documented **RESTful APIs** with **MySQL** and **SQL Server** integration, implementing business logic, data validation, and CRUD workflows for production systems.
- Independently managed client delivery — scoping requirements, estimating timelines, and shipping bug-free releases on schedule across 5+ concurrent engagements.

Projects

SwiftEHR – Hospital Management System

Jan 2022 – Present

Java, Spring Boot, Spring Security, JWT, MySQL

- Designed and developed backend modules for patient management, appointment scheduling, and billing workflows, improving operational efficiency by **30%**.
- Built secure **REST APIs** with **JWT authentication** and role-based access control (RBAC) for multi-role hospital staff access.
- Integrated **Twilio SMS and WhatsApp APIs** for real-time appointment notifications, reducing missed appointments by **25%**.
- Optimized backend query performance using **Spring Data JPA** and indexed SQL queries, improving API response times under high load.

ProcessWurks – SaaS Workflow Automation Platform

Jan 2023 – Dec 2023

Java, Spring Boot, Kafka, Azure, Redis

- Built a multi-tenant **SaaS platform** serving **200+ accounting firms**, enabling automated document and task workflow management.
- Designed **Kafka-based asynchronous pipelines** for distributed workflow processing, ensuring reliable event delivery across microservices.
- Implemented **Azure**-based cloud deployment and service integration for scalable, multi-tenant backend operations.

TCARE – Healthcare Communication Platform

Jan 2021 – Dec 2023

Java, Spring Boot, Kafka, Twilio, Azure Communication Services, MySQL

- Built a real-time caregiver communication platform with **Kafka**-driven alert pipelines for emergency event processing.
- Automated critical emergency notifications using **Azure Communication Services** and **Twilio**, ensuring sub-second alert delivery to caregivers.
- Developed secure **REST APIs** for user management, RBAC, and communication workflows serving healthcare providers.

Key Achievements

- Improved API response time by 30% by implementing Redis caching, query optimization, and connection pooling.
- Designed and implemented Kafka-based event-driven pipelines to enable scalable and asynchronous system communication.
- Enhanced system reliability by implementing fault tolerance patterns using Resilience4j (circuit breaker, retry, rate limiter).

Education

MCA – Anjalai Ammal Mahalingam Engineering College

2016 – 2019

CGPA: 7.83

Achievements

- Outstanding Performance Certificate – Intulogic Pvt Ltd
- 1st Prize – Debugging Event, AVVM Sri Pushpam College
- 2nd Prize – Debugging Event, AVC College of Engineering
- Basketball Tournament Winner – Anjalai Ammal Mahalingam Engineering College
